

QUARTERLY STATISTICAL & ECONOMIC REPORT

June 1999

This *Quarterly Statistical and Economic Report* has been prepared by the staff of the Research and Economic Analysis Division of the State Department of Business, Economic Development & Tourism (DBEDT). The report provides concise statistical information and analyses on Employment, Income and Prices, Taxes, Tourism, and Construction, as well as an overview of the State of Hawaii and the four counties

Director, Dr. Seiji F. Naya, heads the department. This report was prepared under the direction of the division administrator, Dr. Pearl Imada Iboshi.

Technical notes and source descriptions have been kept to a minimum. However, the staff of the Research and Economic Analysis Division would be happy to respond to any inquiries of a technical nature that readers may have (586-2466). The quarterly information contained in this report reflects data received by the Research Division on or before June 17, 1999.

On-line availability of Quarterly Statistical and Economic Report

Since 1988, the Hawaii Department of Business, Economic Development & Tourism has had the *State of Hawaii Data Book* available on-line to anyone with a personal computer and a modem. Since 1997, the *Quarterly Statistical and Economic Report, State of Hawaii Data Book* and other DBEDT publications and information have been made available over the Internet at http://www.hawaii.gov/dbedt/index.html.

For further information about available data and sources, users should call the Research and Economic Analysis Division's Business Resource Center at (808) 586-2424.

This report has been catalogued as follows:

Hawaii. Dept. of Business, Economic Development and Tourism. Research and Economic Analysis Division.

STATE OF THE ECONOMY

Indications that Hawaii's economic performance is improving have begun to emerge. Employment continues to rise while unemployment falls. Personal income growth remains above 2 percent. Much of the lower tax revenues reflect the initial effects of income tax rate reductions. Visitor arrival numbers appear to have stabilized. Construction is expanding. And the growth in bankruptcies has slowed dramatically.

While the number of non-agricultural wage and salary jobs continued to fall in the first quarter of 1999 relative to the year-earlier-quarter, civilian employment grew by 1.3 percent (Table 1). The difference may reflect growth in the number of self-employed workers. Moreover, both the number of unemployed and the unemployment rate are down sharply from the first quarter of 1998.

Personal income growth accelerated to 2.3 percent in the fourth quarter of 1998 relative to the fourth quarter of 1997 (the latest data available, Table B-2). Consistent with the suggestion that the number of self employed workers may be rising, the proprietors' income component grew by 5.0 percent in 1998 (Table B-5).

Tax revenues fell in the first quarter of 1999 relative to the first quarter of 1998 (Table 1). But a large portion of this decline was due to the implementation of lower personal income tax rates that became effective in January. However, it should also be noted that general excise tax revenue, which was not affected by a rate change, also fell in the first quarter of 1999 relative to the year-earlier quarter.

After four consecutive quarters of decline, the number of visitor arrivals

expanded by 1.2 percent from the first quarter of 1998 through the first quarter of 1999. All of the growth came from the westbound market (up 7.5 percent) while the number of eastbound visitors fell by 9.2 percent. Average length of stay increased in the first quarter, and the increase came from eastbound, rather than westbound, visitors (Table D-6).

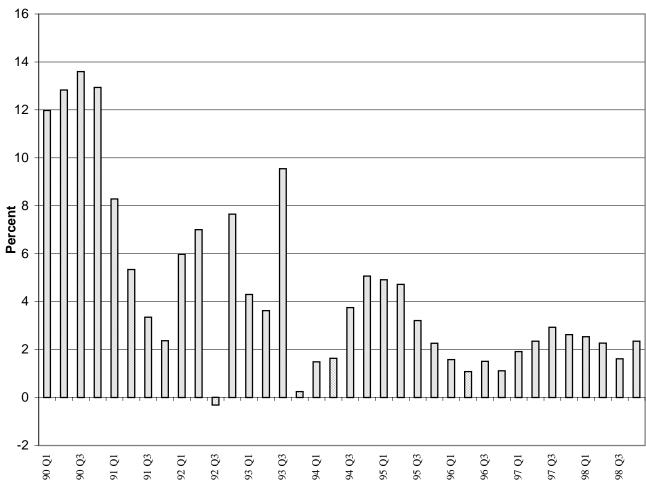

Indicators of both private and public construction activity grew sharply in the first quarter. The value of total private building authorizations grew by 24.6 percent from the first quarter of 1998 through the first quarter of 1999 (Table E-1). Most of this growth came from expansion in commercial and industrial construction, including hotels. State CIP expenditures almost tripled over the period with spending on hospitals, schools, and highways playing important roles.

Bankruptcies continued to grow in the first quarter, but the rate of growth was significantly lower than in any quarter since 1995 (Table F-1). Moreover, the number of Chapter 13 filings actually dropped by 23 percent.

While growth on the Mainland continues, there are some indications that the Federal Reserve Board will move to raise interest rates. Ideally, this will cool the recent signs of inflationary pressure without undermining the economy's real growth. Improvements in several Asian economies have emerged. However the changes are not strong enough to warrant strong upward revisions in DBEDT's forecasts for Hawaii. As a result, with some exceptions, the overall forecast is unchanged from last quarter.

Figure 1. Annual Growth in Personal Income

[percentage change from the same period in previous year]

Source: Table B-2. Personal Income.

OUTLOOK OF THE ECONOMY

The economic outlook for Hawaii has improved slightly from the last report. The Mainland economy continues its robust growth, and there are growing signs that recovery is returning to Asian economies. However, these signs are not yet strong enough to do more than modestly raise the forecasts of some indicators. Overall, this quarter's forecast is largely unchanged.

The June 10, 1999, issue of the *Blue Chip Economic Indicators*, a consensus report of approximately 50 forecasters, reported an upward revision of expected U.S. growth. Real gross domestic product (GDP) is expected to rise by 3.9 percent in 1999 and by 2.5 percent in 2000. The unemployment rate is expected to average 4.3 percent in 1999 and 4.4 percent in 2000.

The March 1999 issue of *The UCLA* Anderson Forecast for California shows stronger expected growth for 1999 but lower growth for 2000 when compared to the December 1998 report. Real personal income in 1999 is expected to be up 4.7 percent but only up 2.7 percent in 2000. Employment growth is expected at 2.2 percent and 2.4 percent, respectively. Both employment growth forecasts are slightly down from the December 1998 report.

Federal Reserve Board actions may adjust these forecasts downward slightly in the near future as the likelihood grows of an interest rate increase. Higher-than-expected inflation in April and signs of continuing rapid growth suggest the Fed will act to cool the pace of the U.S. expansion.

However the Fed will, no doubt, act with an eye toward preserving the gains seen in Asian economies.

Blue Chip Indicators also raised the expected growth rates in 1999 and 2000 for South Korea (2.5 and 4.0 percent, respectively), Taiwan (4.0 and 4.6 percent), and Singapore (1.0 and 3.0 percent). The forecast for Japan in 1999 fell to -1.2 percent but returns to a positive 0.5 percent in 2000. Recent reports from Japan indicate that the economy expanded more quickly than expected in the first quarter.

At this writing, the yen stands at 120 per dollar, down from 119 of last quarter's report. Strength, or at least stability, in the yen is important to the affordability of Hawaii vacations for visitors from Japan. For 1999, the *Blue Chip Indicators* expect the yen to average 127.8 yen per dollar and appreciate to 121.5 yen per dollar in 2000.

Thus, while the Mainland economy continues to expand, there are reasons to expect some moderation in future growth. Some economic improvement is seen in Asian economies, but solid recovery in Japan probably still lies ahead. With a few exceptions, these considerations leave DBEDT's economic forecast generally unchanged.

The following table reports DBEDT's latest forecast. Growth in visitor arrivals was bumped up modestly to reflect expectations of improved eastbound traffic. Personal income growth was raised by 0.1 percentage point to 2.2 percent for 1999, but the forecast for job growth was left unchanged at 0.1 percent for the year. Overall, DBEDT expects a continuation in the modest improvement in growth experienced for the last year.

COUNTY ECONOMIC CONDITIONS

While the Neighbor Islands continued to show relatively stronger growth than Oahu in the first quarter, the pattern was more complex than in recent quarters. Kauai County appears to have been the outstanding performer in the first three months of 1999.

Civilian employment expanded and unemployment declined in all four counties. Kauai County led the other counties with a 6.5 percent increase in employment from the first quarter of 1998 through the first quarter of 1999 (Table 5). At the same time, the unemployment rate fell by 2.3 percentage points on Kauai over the period. Hawaii County experienced the smallest increase in employment (0.2 percent, Table 3), and the City & County of Honolulu's unemployment rate fell slightly to 5.1 percent (Table 2).

Turning attention to non-agricultural wage and salary jobs – Hawaii and Honolulu counties experienced non-agricultural job losses from the first quarter of 1998 through the first quarter of 1999 (Tables 2-4). Maui and Kauai County enjoyed increases, of 1.1 and 3.8 percent respectively (Table 5).

In percentage terms, most of Kauai County's non-agricultural job growth came in construction, manufacturing and retail trade. Maui County also experienced a sharp jump in construction jobs. In contrast, the number of construction jobs fell by 19.5 percent in Hawaii County and by 6.4 percent in the City & County of Honolulu. Considering retail trade in each county - jobs expanded in Hawaii (2.2 percent) and Kauai (4.8 percent), remain unchanged in Maui, and declined by 3.0 percent in Honolulu.

Service jobs in the individual counties grew in Honolulu and Kauai (2.3 percent and 4.0) more-than-offsetting declines in Maui and Hawaii – of 0.2 and 2.4 percent, respectively. The hotels portion of service jobs fell everywhere except in Kauai County.

To a large degree, Kauai's relatively strong performance in the first quarter was due to higher visitor growth. The total number of arrivals expanded by 9.7 percent and hotel occupancy rates jumped by 5.4 percentage points. Maui County also enjoyed a 2.8 percent increase in total visitor arrivals and a 6.1 percentage point rise in average occupancy. By contrast, visitor arrivals and hotel occupancy rates fell in both Honolulu and Hawaii counties.

The growth in arrivals in all counties came from westbound visitors. Westbound arrivals expanded by 14.2 percent in Kauai County and by 8.9 percent in Maui County. Honolulu and Hawaii counties experienced westbound arrival growth of 6.8 percent and 2.5 percent, respectively. Eastbound arrivals declined in all counties.

As measured by private building authorizations, construction grew sharply in the first quarter except in Hawaii County. Construction authorizations grew at double-digit rates in the other counties, with Kauai County authorizations almost doubling. Hawaii County authorizations fell by 38.6 percent, due largely to a slower pace of additions and alterations when compared to 1998. However, even in Hawaii County, single family home authorizations were up dramatically in March.

A. LABOR FORCE AND JOBS

Signs of improvement in Hawaii's labor market may be emerging. While the number of non-agricultural wage and salary jobs fell slightly in the first quarter, the civilian labor force and civilian employment grew. Both the number of unemployed and the unemployment rate dropped significantly in the first quarter of 1999 from the same period one year ago.

The number of non-agricultural wage and salary jobs fell by 0.2 percent from the first quarter of 1998 through the first quarter of 1999 (Table A-5). The drop was only one-third the size of the decline from the first quarter of 1997 to 1998. At 528,550 the number of non-agricultural jobs is slightly higher than the number recorded in the first quarter of 1990.

In contrast with the number of jobs, civilian employment grew by 1.3 percent in the first quarter of 1999 relative to the year-earlier-quarter (Table A-2). By this measure, first quarter employment in Hawaii has never been higher.

The diverging signals from jobs and employment data have persisted for several years and the QSER has regularly commented While the data come from different on it. establishments, surveys (iobs from employment from households), the methodologies are linked. Current thinking is that the difference reflects a growing number of self-employed workers in the economy.

The other side of employment, unemployment, also improved in the first quarter. Table A-3 shows that the number of unemployed fell by 4 percent from the first quarter of 1998 through the first quarter of 1999. The number of unemployed has fallen steadily since the fourth quarter of 1997.

Similarly, the unemployment <u>rate</u>, the ratio of the unemployed to the labor force, was down from 6.1 percent in the first quarter of 1998 to 5.8 percent in the first quarter of 1999.

In the private sector, the number of wage and salary jobs declined in most industries in the first quarter of 1999 relative to the first quarter of 1998. Construction jobs were down 3.1 percent (Table A-6), but this was one of the lowest rates of job loss for this industry in several years. Of even more significance because of the larger number, retail trade jobs fell by 1.6 percent (Table A-11). Only the services sector recorded an increase, of 1.9 percent, in the number of jobs in the first quarter (Table A-14). However the hotels component of services jobs fell by 2.7 percent (Table A-15).

The number of wage and salary jobs declined in all three government sectors from the first quarter of 1998 through the first quarter of 1999. Federal government civilian jobs fell by 0.8 percent, State government jobs fell by 0.2 percent, and local government jobs declined by 0.6 percent (Tables A-16 through A-18).

Cross-state claims for unemployment compensation continued to fall. First-quarter claims by recent arrivals for unemployment compensation against other states (Table A-20) fell to the lowest level since 1982. First-quarter claims by former Hawaii residents against Hawaii declined by 14.8 percent (Table A-21). Both types of data are subject to multiple influences. Thus, new arrival claims against other states reflect decisions about moving to Hawaii and the labor market here. Similarly, former resident claims against Hawaii reflect decisions to move to the Mainland and the job market there.

B. INCOME AND PRICES

Personal income growth rose in the fourth quarter of 1998 (the latest data available) relative to the previous quarter, pushing growth for the year up to 2.2 percent. Encouragingly, the growth was well distributed across wages and salaries, proprietors' income, and dividends, interest, and rent.

According to the U.S. Bureau of Economic Analysis (BEA), personal income grew by 2.3 percent from the fourth quarter of 1997 through the fourth quarter of 1998 (Table B-2). This was up sharply from the annual rate of 1.6 percent reported for the third quarter of 1998. Overall, personal income was 2.2 percent higher in 1998 than in 1997.

The largest source of growth (adjusting for the size of components) came from the 1.8 percent rise in wages and salaries (Table B-3). This was more than twice the rate experienced in the third quarter of 1998 and helped raise the total 1998 annual growth of wages and salaries to 1.6 percent.

Proprietors' income continued to grow strongly at 4 percent from the fourth quarter of 1997 through the fourth quarter of 1998 (Table B-5). Although this rate of increase is down from immediately previous quarters, proprietors' income was up by 5.0 percent in 1998 over 1997. Strong growth in this component is consistent with the conjecture that rising self-employment helps explain the growth of civilian employment even as non-agricultural wage and salary jobs decline (see the text of A. Labor Force and Jobs).

Another robust feature of personal income growth in the fourth quarter was the

2.7 percent rise in dividends, interest, and rent. BEA had revised downward its estimates of this component in October 1998 to exclude capital gains. The acceleration of growth in this component after the adjustment suggests that the strong Mainland economy may be bolstering incomes of Hawaii-based creditors and investors.

Adjusting for size, transfer payments were the second-largest component of personal income growth in the fourth quarter. Such payments grew by 3.8 percent from the fourth quarter of 1997 through the fourth quarter of 1998 (Table B-7). Transfers consist of payments for which no current services are provided, including both public and private retirement payments. The fourth quarter's growth was lower than the increases in the first half of the year.

Private earnings grew by 2.4 percent in the fourth quarter of 1998 relative to the year-earlier quarter (Table B-1). After adjusting for size of industry, most of the growth came from services, followed by finance, insurance, and real estate, and then by wholesale trade. Earnings declined in some industries, most notably in construction.

Earnings also fell in the public sector in the fourth quarter (Table B-1). Most of the decline came from the military, but state and local government earnings also fell.

Adjusted for inflation, Hawaii's income growth looks even stronger because the price level has been *falling*. The Honolulu Consumer Price Index declined 0.2 percent from 1997 to 1998 (Table B-9), implying that a given level of income could purchase more goods and services than previously.

C. TAX REVENUES

State general fund tax revenue fell in the first quarter of the calendar year compared to the same period last year. The decline was spread across all the major tax instruments and reflected both technical changes in tax rates and economic activity.

General fund tax revenues fell by 3.9 percent from the first quarter of 1998 through the first quarter of 1999 (Table C-2). This was the first quarter of annual decline since the third quarter of 1997.

Most of the decline in general fund revenue can be attributed to the 3.7 percent fall in net individual income tax revenue over the period (Table C-4). In turn, the lower individual income tax receipts were due to the reduction in income tax rates that were passed in 1998 and became effective January 1, 1999.

The effects of the lower tax rates are most apparent in the withholding tax on wages (Table C-7). These revenues fell by 3.5 percent from the first quarter of 1998 through the first quarter of 1999. Employer withholding at the new lower rates began to appear in February 1999 according to the Department of Taxation. The lower rates also explain the 0.9 percent reduction over the same period in declaration of estimated taxes (Table C-5).

One component of the individual income tax revenues increased dramatically:

payments with returns grew by 17.8 percent in the first quarter relative to the first quarter of 1998. This growth may reflect a lag in taxpayer adjustment to a reduction in withholding rates in that began in late 1997. Payments with 1998 returns will be especially high if taxpayers did not alter their withholding status as a result of the lower withholding rates.

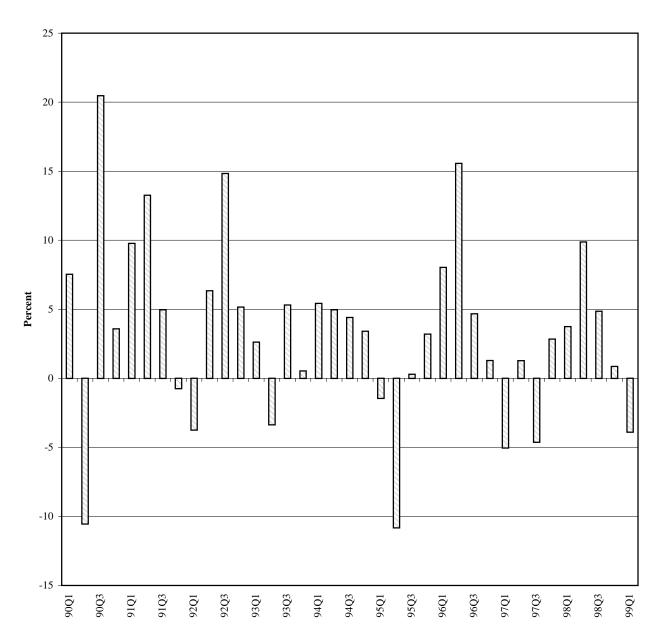

But not all of the reduction in general fund tax revenues is explained by the lower individual income tax rates. General excise and use tax revenues fell by 1.5 percent in the first quarter of 1999 relative to the year-earlier-quarter (Table C-3). The decline was concentrated in January and February and the Department of Taxation has attributed this to effects related to the continuing movement toward electronic filing.

Corporate income tax revenues fell by 29.9 percent in the first quarter of the year compared to the first quarter of 1998 (Table C-9). Although dramatic, it is difficult to interpret the change, as corporate income tax revenue is notoriously volatile.

The transient accommodations tax (TAT) rate was raised by 1998 legislation and took effect in January 1999. This is reflected in the rise of 9.3 percent in TAT revenues in the first quarter (Table C-13). Beginning in 1999, all of the funds are dedicated to the Convention Center, the Hawaii Tourism Authority, and the county governments.

D. TOURISM

The number of visitor arrivals grew modestly in the first quarter, reversing the declines experienced throughout 1998. As in recent quarters, westbound activity more than compensated for declines in eastbound traffic.

Total visitor arrivals grew by 1.2 percent from the first quarter of 1998 to the first quarter of 1999 (Table D-2). This was a welcome reversal of the four consecutive quarters of arrival declines experienced in 1998.

The growth in visitor arrivals again came exclusively from the westbound market. Westbound arrivals expanded by 7.5 percent in the first quarter of 1999 relative to the year-earlier-quarter (Table D-3). This was the largest quarterly year-to-year increase since the fourth quarter of 1997.

On the other hand, the number of eastbound arrivals declined by 9.2 percent over the period (Table D-4). While the rate of decline was lower than recently experienced, the decline remains disturbingly large.

Table D-5 indicates that the daily average number of visitors in Hawaii grew by 3.6 percent from the first quarter of 1998 to the first quarter of 1999. Again, this growth largely came from the westbound market. Indeed, the average number of westbound visitors in the first quarter was higher than in

any other quarter since 1990. By contrast the average daily census of eastbound visitors declined by 1.8 percent.

Average length of stay grew from 8.93 days in the first quarter of 1998 to 9.17 days in the first quarter of 1999 (Table D-6). However, the pattern of changes in length of stay was the reverse from the patterns noted above: Westbound length of stay *fell*, while eastbound length of stay increased.

While overall arrivals and lengths of stay data in the first quarter are encouraging, there continue to be troubling indicators. Hotel occupancy rates in the first quarter were down by 1 percentage point compared to the first quarter of 1998 (Table D-7). The first quarter occupancy rate has not been this low since 1993. Moreover, both hotel and retail trade jobs declined in the first quarter (Tables A-11 and A-15), indicating that recovery from the Asian crisis still lies in the future.

Effective January 1999, responsibility for the collection and distribution of visitor-related data passed from the Hawaii Visitors and Convention Bureau to the Research and Economic Analysis Division of DBEDT. This change was legislated in conjunction with the creation of the Hawaii Tourism Authority in 1998. Readers interested in monthly visitor reports may visit www.hawaii.gov/dbedt/monthly/index.html.

QSER, June 1999

Quarterly averages are computed by Hawaii State Department of Business, Economic Development & Tourism from PKF monthly averages.

Sources: Hawaii State Department of Business, Economic Development & Tourism and PKF-Hawaii.

E. CONSTRUCTION

Construction activity indicators grew quickly in the first quarter of the year compared to the first quarter of 1998. The growth came from both the private sector (led by commercial and industrial authorizations) and in the public sector (led by general obligation bond and special fund capital improvement projects).

Table E-1 reports that the contracting tax base, which reflects recently-completed construction, fell by 3.3 percent from the first quarter of 1998 through the first quarter of 1999. However the decline was due to an upward technical revision of the first quarter 1998 number. Next year, a similar revision will also be made to the 1999 figure.

Future private construction activity, as reflected in the value of building authorizations, grew by 24.6 percent over the period. The growth in authorization values was spread across the counties with one exception. The value of authorizations fell 38.6 percent in Hawaii County, largely reflecting reduced additions and alterations activity relative to 1998 (Table E-6). However, March 1999 data suggest some rebound in Hawaii County authorizations, particularly for single family homes.

To one degree or another, new permits for single family homes were factors in this growth in Honolulu, Maui, and Kauai counties. However, statewide, much of the authorization growth came from commercial and industrial activity. Most notably, Hilton Hotels received a \$51 million authorization on Oahu. Maui County also reported new authorizations for Kamehameha schools and renovations to the Maui Mall. Significant alterations in Princeville were recorded in February in Kauai County.

Perhaps reflecting the tilt toward commercial and industrial activity, the *number* (as opposed to the value) of single family home authorizations only expanded 5.5 percent from the first quarter of 1998 to 1999 (Table E-2). The number of multifamily units authorized actually fell by 20.2 percent (Table E-3).

Public construction spending also expanded in the first quarter. Total capital improvement project (CIP) expenditures almost tripled from the first quarter of 1998 to the first quarter of 1999 (Table E-8). Most of this growth came from general obligation bond and special funds. However, there was also substantial growth from revenue bonds and federal government funds.

A large share of the public spending went for education-related construction: from Mountain View Elementary on the Big Island, to Baldwin High on Maui, to University of Hawaii facilities at Manoa and Hilo. Special fund projects also included a substantial education component; in addition, there were expenditures for the contra-flow lane on H-1 in leeward Oahu and improvements at Keahole Airport on the Big Island. Federal fund expenditures were made for highway work related to the junction of H-3 and H-1, Honolulu International Airport improvements, and agricultural science facilities.

Overall, the pace of construction activity was enough to slow the rate of construction job loss to 3.1 percent in the first quarter (Table A-6). If the pace continues, Hawaii may finally see the number of construction jobs turn around in 1999.

First Hawaiian Bank has discontinued compiling Government Contracts Awarded. Hawaii State Department of Business, Economic Development & Tourism has compiled preliminary estimates beginning with the fourth quarter 1997 based on data in *Building Industry*.

Source: Hawaii State Department of Taxation; F. W. Dodge; county building departments; First Hawaiian Bank; *Building Industry* (various issues) and tabulations by Hawaii State Department of Business, Economic Development & Tourism.

^{1/} Formerly, this category was "Value of Construction Completed".

^{2/} Includes hotels.

^{3/ 1998} Contracting tax base was revised upward by Hawaii State Department of Taxation in June 1999 to reflect distribution of formerly unallocated general excise tax revenue.

^{4/} Subject to revision by Hawaii State Department of Taxation.

F. OTHER INDICATORS

The March 1999 issue of the *Quarterly Statistical and Economic Report* inaugurated a new section. The Research and Economic Analysis Division augments its analysis with new indicators of the economy. Among them are indicators that do not easily fit within our existing categories so we established this "Other Indicators" section. At this time the section includes information on bankruptcy filings in Hawaii. We expect to add more tables as resources permit.

Bankruptcy filings increased again in the first quarter of 1999, but the rate of increase was much lower than in previous years. Moreover, the second-largest category of bankruptcy filings in Hawaii (Chapter 13 filings) actually declined from the first quarter of 1998 through the first quarter of 1999.

Total bankruptcy filings grew by 9.8 percent from the first quarter of 1998 through the first quarter of 1999 (Table F-1). Virtually all of the growth came in Chapter 7 filings that expanded by 13.8 percent over the period. Chapter 7 is the most common form of filing, involving liquidation of a debtor's assets (subject to exceptions) to satisfy debts. Debts in excess of assets are often "forgiven" in this type of filing. Businesses that wish to liquidate their assets and terminate business may also file under Chapter 7.

While bankruptcy numbers continue to rise, the rate of increase was dramatically lower than in recent years. In the first quarter of 1999, the change in the total of Chapters 7, 11, 12 and 13 filings for bankruptcy was almost 20 percentage points lower than in the first quarter of 1998, and Chapter 7 filings alone was more than 16 percentage points.

Chapter 11 and Chapter 13 filings involve establishing a repayment plan with creditors. Corporations generally use Chapter 11 (corporations may also file under Chapter 7), while individuals use Chapter 13. There is also a Chapter 12 filing for family farms, but this is rarely used in Hawaii.

There are relatively few Chapter 11 (corporate repayment) filings. Indeed, in the first quarter of 1999, Hawaii experienced 8 such filings compared to 7 in the same period last year.

Some individuals file for bankruptcy under Chapter 13, but these filings also form a relatively small share of the total. Even so, it is noteworthy that Chapter 13 filings fell by 22.7 percent from the first quarter of 1998 to the first quarter of 1999, from 141 to 109.

At the national level, the number of bankruptcies fell by 6.6 percent from the first quarter of 1998 through the first quarter of 1999. This reversed a long period in which the number of bankruptcies was also growing on the Mainland. For national bankruptcy data for the first quarter of 1999, see: http://www.uscourts.gov/Press_Releases/pr052199.pdf.

III. TERMS AND DEFINITIONS

- Agriculture Wage and Salary Jobs Full- and part-time jobs for which payment was made by the employer in the survey week containing the 12th of the month. Includes farm jobs and machinery operators. Closely related management and services jobs are included for sugar and pineapple but are excluded for other types of agriculture.
- Average Daily Visitor Census Average number of visitors present daily in the state. Figures are computed monthly by the Research & Economic Analysis Division, DBEDT based on arrival and departure dates from ground and in-flight questionnaires.
- **Average Length of Stay** Number of days visitors are in the State including the day of arrival and the day of departure.

Bankruptcy Filings -

- Chapter 7 Is available to both individuals and business debtors. Its purpose is to achieve a fair distribution to creditors of whatever non-exempt property the debtor has and to give the individual debtor a fresh start through the discharge in bankruptcy.
- Chapter 11 Is available for both consumer and business debtors. Its purpose is to rehabilitate a business as a going concern or reorganize an individual's finances through a court-approved reorganization plan.
- **Chapter 12** Is designed to give special debt relief to a family farmer with regular income from farming.
- Chapter 13 Is available for an individual with regular income whose debts do not exceed specific amounts, typically used to budget some of the debtor's future earnings under a plan through which creditors are paid in whole or in part.
- **Additional information** may be found at the American Bankruptcy Institute "Bankruptcy Chapters" website http://www.abiworld.org/media/chapters.html
- Civilian Employment Persons 16 years of age or older who, during the survey week containing the 12th of the month, were either at work for pay or profit, or worked without pay for 15 hours or more on a family farm or business, or were with a job but not at work. Both permanent and temporary employees and those who are working either full- or part-time are included.
- **Civilian Labor Force** –Total of employed and unemployed persons, excluding those in the armed forces and 16 years of age or under. U.S. Census Bureau does surveys for the U.S. Bureau of Labor Statistics.

- Civilian Unemployment Persons 16 years of age or older who (1) did not work at all during the survey week but were actively seeking work and were available for work; or (2) did not work at all, were available for work, and were waiting to be called back from layoff or were waiting to report to a new wage or salary job within 30 days.
- Consumer Price Index: Honolulu or U.S. -Measure of the average change in prices over time for a fixed market basket of goods and services. It is compiled by the U.S. Bureau of Labor Statistics. The index measures changes from a reference date, i.e., 1982-84, which is designated as 100.0. For example, a CPI-U (where U refers to All Urban Consumers), All Items of 171.9 as the annual average for 1997 indicates the average prices of that group's basket was 71.9 percent higher than the weighted average of those same goods and services in 1982-84. Data are published monthly for the U.S. and semi-annually for Honolulu. As of January 1998, BLS changed the reference basket based on 1982-84 consumer expenditures to a 1993-95 basket. The base continues to be 1982-84 = 100.0. The BLS Internet site has more information about the CPI at http://stats.bls.gov/cpihome.htm.
- Contract Construction Jobs Jobs held by any person engaged in construction, repairing, erecting, or improving buildings or structures of any type or description, and any installations therein. Such construction includes not only residential and non-residential building projects, both private and public, but also highway and road construction, street and sidewalk construction, repair, excavations, bridges, docks, and other heavy construction projects.
- Contracting Tax Base The total receipts of businesses engaged in contracting to erect, construct, repair, or improve buildings or structures of any kind or description, or to make any installation therein. Attributed to any business engaging in the practice of architecture, engineering, land surveying, landscape architecture, and the practice of pest control or fumigation.
- **Dividends, Interest, and Rent** Personal income received by individuals and on behalf of individuals by quasi-individuals, including non-profit institutions and private trust funds administered by fiduciaries. Dividends are payments in cash or other assets by corporations in the U.S. or abroad to Hawaii residents. Interest consists of monetary interest, on private and gov-

- ernment accounts and bonds, and imputed interest, on pensions and insurance as earned rather than as received. Rent is monetary income as received on real property, royalties, and imputed as value of owneroccupied nonfarm dwellings.
- **Earnings** Is a subtotal of personal income components: wages and salaries, other labor income, and proprietors' income. It is often used in regional analysis as a proxy for the income generated from participation in current production.
- **Eastbound Visitors** Visitors who stayed in Hawaii for at least one night but less than one year with flights from Asia, Australia, and the Pacific.
- **Federal Government Jobs** Includes those in the civilian agencies, i.e. Department of Defense, Agriculture, United States Postal Service and the various armed services exchange systems.
- General Excise (Gross Income) Tax Tax charged to businesses on gross sales or gross income. The tax rate is 0.5 percent on wholesaling and intermediary services, blind vendors, producing, manufacturing, sugar processing and pineapple canning; all other activities (retailing, business and professional services, contracting, theater, amusement, radio, interest, commissions, rentals) are taxed at 4.0 percent, except insurance commissions to general agents, subagents and solicitors, who are taxed at 0.15 percent.
- General Excise and Use Tax Base The value of all goods and services sold, including the value of tangible personal property imported into Hawaii for own use or consumption.. One of the most comprehensive measures of business activity in the state.
- General Fund Tax Revenues Receipts of the general excise and use tax, and net individual and corporate income taxes. The general government fund used to account for all financial resources except those required to be accounted for in another fund, such as the highway, airport or capital improvement fund.
- Honolulu Construction Cost Indexes: High-Rise or Single Family Compiled by First Hawaiian Bank. These indexes measure changes in contractors' costs for building materials and labor.
- **Hotel Jobs** Jobs in hotels, rooming houses, camps, and other lodging places.
- **Hotel Occupancy Rate** The percentage of occupied rooms in a hotel. Hotel occupancy rates depend not only on the number of visitors and their length of stay,

- but also on the hotel room inventory, e.g., a large increase in new hotel units results in a drop in occupancy rates, until such time as visitor traffic builds up enough to fill them. Rates are obtained from a sample survey conducted on a monthly basis.
- **Initial Agent Claims** Notices of unemployment filed against another state by its workers who have moved to Hawaii.
- **Initial Liable Claims** Notices of unemployment filed against Hawaii by Hawaii workers who have moved to another state.
- **Local Government Jobs** Includes those in the county governments.
- Manufacturing Jobs Jobs in manufacturing industries, or those activities by any person or establishment that buys materials, performs work on such materials, and changes such materials into a finished or semi-finished product. Includes compounding, canning, preserving, packing, printing, publishing, mailing, processing, refining, or preparing for sale, profit, or commercial use, either directly or through the activity of others, in whole or in part, any article, substance, or commodity such as textiles, apparel, printing, publishing, food processing, and durable goods
- Net Earnings BEA Personal Income component Earnings less Personal Contributions for Social Insurance. It can be used as a proxy for income before taxes.
- Net Individual or Corporation Income Tax Revenue For individuals, it is calculated as declaration of estimated taxes plus payments with returns plus withholding tax on wages less refunds. Net corporate income tax revenue is calculated as declarations of estimated taxes plus payments with returns less refunds.
- Non-Agriculture Wage and Salary Jobs Derived monthly from a sample survey of employers reporting the number of persons who received pay for any part of the pay period containing the 12th of the month. Includes all full- and part-time non-agricultural workers, permanent and temporary workers, and workers on paid sick leave and paid vacation.
- Other Goods and Services Honolulu Consumer Price Index component detail. Prior to the CPI 1998 Revision, it measured the change in average prices of tobacco products, personal care goods and services, and personal and educational expenditures. Beginning with January 1998 data, this category includes tobacco, personal care, and miscellaneous goods and

- services. Other components, for example, school-books and tuition, moved to the new "Education and Communication" and recreational reading to "Recreation". BLS' *Monthly Labor Review* (December 1996), and BLS' Internet site have more information about the CPI at http://stats.bls.gov/cpihome.htm.
- Other Labor Income Personal income component that consists of employers' contributions to privately-administered benefit plans, fees paid to corporate directors, and miscellaneous fees.
- Personal Contributions for Social Insurance Personal income earned, if not immediately received, by employees and self-employed who participate in various government programs such as social security, Medicare, retirement, and veterans life insurance programs. Contributions are excluded from Personal Income but are included when received as "Transfer Payments".
- **Personal Income** –Income received by or on behalf of residents from all sources—participation in production, from government and business transfer payments and from government interest (treated like a transfer payment by the Bureau of Economic Analysis). The major component is wages and salaries.
- **Proprietors' Income** Earnings of unincorporated businesses, (proprietorships, partnerships, and producers' cooperatives), from their current business operations. It includes both farm and non-farm businesses, but excludes capital gains and losses.
- **Retail Trade Jobs** Jobs in those establishments that are engaged in sales of tangible personal property to the customer for use or consumption and not for resale.
- **Services Jobs** Jobs in those activities that are engaged in for other persons for a consideration which involve the rendering of a service as distinguished from the sale of tangible property or the production and sale of tangible property. Includes all professional services.
- State Government Jobs Education includes all employees under the Department of Education (DOE) and the University of Hawaii System. This includes public library personnel, substitute teachers who received pay during the pay period including the 12th of the month, and support personnel such as cafeteria workers, classroom cleaners, and school security attendants. Also included are part-time employees in special programs such as the A+ After School Program.
- **State Government Jobs Non-Education** Includes all other executive branch departments (i.e. Agriculture,

- Transportation, etc.), the legislative and judicial branches, and the Research Corporation of the University of Hawaii (RCUH).
- **Total Visitor Arrivals** All persons who stayed in Hawaii for a period between one night and one year. Includes westbound arrivals (traveling from North America) and eastbound arrivals (from Asia, Australia, and Oceania).
- **Transfer Payments** As a component of Personal Income, these are payments for which no current services are performed. They are payments by government and business to individual or nonprofit institutions serving individuals. Examples are social security and government employees' retirement.
- **Transient Accommodations Tax** Tax levied on resort time-share vacation units and the furnishing of a room, apartment, suite which is customarily occupied by a person or group for fewer than 180 consecutive days by a hotel, apartment, motel, or cooperative apartment, rooming house, or other place in which lodgings are generally furnished to transients. The tax is now imposed at the rate of 7.25 percent.
- Unallocated General Excise & Use Tax Revenues General excise and use tax revenues that could not be allocated to specific activities of the general excise & use tax. It also includes collections from penalty and interest, assessments and corrections, delinquent collections, refunds, protested payments, settlements, etc.
- **Unemployment Rate** Ratio of unemployed persons to the civilian labor force expressed as a percentage.
- Use Tax Excise tax levied on tangible personal property which is imported or purchased from an unlicensed seller for use in the state. The tax is based upon the purchase price or value of the tangible personal property purchased or imported, whichever is applicable. Rates: 0.5 percent, if for resale at retail; 4.0 percent, if for use or consumption.
- Wages and Salaries— The major component of Personal Income includes monetary and in-kind compensation for employment services rendered. Examples are commissions, tips, and meals furnished employees.
- **Westbound Visitors** Visitors who stayed in Hawaii for a period between one night and one year, who traveled from North America (Mainland U.S. and Canada).
- Wholesale Trade Jobs Jobs in those establishments whose sales of tangible personal property is to li-

censed persons for resale or incorporation into a prod- uct or project, and sales to certain leasing companies.
